

Real BOII feasibility case: forecast distribution, target, and climatology

Diagnostic only: 1 issue, 1 station, n=20 targets. Forecast MAE 1.133; strictly prior target-year climatology MAE 0.505 mm/day. empirical p10 to p90 coverage 0.25; nominal p10 to p90 coverage target 0.80; p10 to p90 mean width 1.453 mm/day. Support 20 < 30 and one bootstrap cluster, so no skill interval is identified.
