

Outer training groups

Inner group splits
train neural ensemble

**Held-out inner rows**

Residual + spread
support + realized gain

**Fit the selector**

Fix thresholds or
learn relative benefit

**Unseen outer group**

Refit neural ensemble
apply fixed selector

**Accept correction**

$$\hat{y} = o + \bar{g}$$

Reject correction

$$\hat{y} = o$$

Decision target

$$D = |y - o| - |y - o - \bar{g}|$$
